

## **AMENDMENTS**

### **DETAILED DESCRIPTION OF THE INVENTION**

Please amend the Detailed Description of the Invention as follows:

Please replace paragraph [33] with the following amended paragraph:

Referring to Figure 4, it is contemplated that a side conference call may be configured by an authorized user, such as an administrator or host, by pointing, clicking, and dragging (using an exemplary mouse) a particular participant identifier over to a new conference call identifier, thereby creating a new conference call. For example, an administrator may point, click, and drag participants identifiers #3 and #5 of conference call #1 into the conference call #3 identifier. By doing so, participants #3 and #5 become participants of conference call #3. It is contemplated that the device that performs the pointing, clicking, and dragging of one or more objects within a graphical user interface comprises a mouse or like device. It is contemplated that, in one embodiment, requests made by prospective participants to generate a side conference call is agreed upon by the participants involved. It is contemplated that the server automatically generates a new conference call when all conditions are met for staging a new conference call. The conditions may comprise that a conference call be restricted to certain participants or a number of participants. For example, the side conference may comprise members of a company or organization.
